HoloScanner Team Demo Plan

1. Space requirements.
We need a space with multiple closed areas. We're thinking the GRAIL lab and the hallway or the area behind reboot where the EE restrooms are. The reception area might also work.

2. Furniture, props
We need 2 desks (one for computer, one for demo) and two chairs.

3. Compute, networking, power requirements, number of hololenses needed.
- We need a power outlet for a viewing laptop
- Three Hololenses.
- A monitor and cables for viewing the mesh.

4. Any equipment you need to buy for the demo.
We don't need any special equipment.

5. Your demo experience.
Two to three participants will start with Hololenses with the meshes cleared. We will quickly explain them the game and they will start collecting the targets generated. The targets will have spatial sound and can be collected by approaching them. The game will always display their current score relative to the other players.

At the end of the demo we will show them the mesh they created by walking around the area.
